Natl. Acad. Sci. U.S.A. 99:16899-16903(2002).
-!- FUNCTION: Not known, associated with cell differentiation.
-!- SIMILARITY: Belongs to the UPF0071 family. Some similarity to the thioredoxin family.

-!- FUNCTION: Specifically methylatity).
-!- CAPTALTITIC ACTIVITY: S-adenosyl-L--
homocysteine + IRNA containing C(5)-methylcytosine.
-!- SIMILARITY: Belongs to the methyltransferase superfamily. RsmB/NOP

-!- FUNCTION: Specifically methylates the cytosine at position 967
-("5C967) of 16S TRNA (By similarity).
-!- CATALYTIC ACTIVITY: S-adenosyl-L-methionine + rRNA = S-adenosyl-L-homocysteine + rRNA containing C(5)-methylcytosine.
-!- SIMILARITY: Belongs to the methyltransferase superfamily. RsmB/NOP
                                                           "Complete genome sequence of Vibrio vulnificus CMCP6.";
Submitted (DEC-2002) to the EMBL/GenBank/DDBJ databases.

-!- FUNCTION: Specifically methylates the cytosine at position 967
-!- GIGS FRNA (By similarity).
-!- CATALYTIC ACTIVITY: S-adenosyl-L-methyloytosine.
-!- CATALYTIC ACTIVITY: S-adenosyl-L-methylcytosine.
-!- SIMILARITY: Belongs to the methyltransferase superfamily. RsmB/NOP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              SEQUENCE FROM N.A.

-!- CATALVITIC ACTIVITY: S-adenosyl-L-methionine + rRNA = S-adenosyl-L-homocysteine + rRNA containing C(5)-methylcytosine.
-!- SIMILARITY: Belongs to the methyltransferase superfamily. RsmB/NOP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               MEDLINE=22421331; PubMed=12533478; Wan Sluys M.A., de Oliveira M.C., Monteiro-Vitorello C.B., Van Sluys M.A., de Oliveira M.C., Monteiro-Vitorello C.B., Moon D.H., Takita M.A., Lemos E.G.M., Machado M.A., Ferro M.I.T., da Silva F.R., Goldman M.H.S., Goldman G.H., Lemos M.V.F., El-Dorry H., Tsai S.M., Carrer H., Carraro D.M., de Oliveira R.C., Numes L.R., Siqueira W.J., Coutinho L.L., Kimura E.T., Ferro E.S., Harakava R., Kuramae E.E., Marino C.L., Giglioti E., Abreu I.L., Alves L.M.C., do Amaral A.M., Baia G.S., Blanco S.R., Brito M.S., Cannavan F.S., Celestino A.V., da Cunha A.F., Fenille R.C., Ferro J.A., Formighieri E.F., Kishi L.T., de Souza A.A., Truffi D., Tsukumo F., Yanai G.M., Zaros L.G., Civerolo E.L., Simpson A.J.G., Almeida N.F. -!- CARTALYTIC ACTIVITY: S-adenosyl-L-methionine + rRNA = S-adenosyl-L-homocysteine + rRNA containing C(5)-methylcytosine.
-!- SIMILARITY: Belongs to the methyltransferase superfamily. RsmB/NOP

host specificities.";
Nature 417:459-463(2002).
-!- FUNCTION: Specifically methylates the cytosine at position 967
-!- FUNCTION: Specifically methylates.
(m5C967) of 16S rRNA (By similarity).
-!- CATALYTIC ACTIVITY: S-adenosyl-L-methionine + rRNA = S-adenosyl-L-homocysteine + rRNA containing C(5)-methylcytosine.
                                                                                                                                                                                                        -!- SIMILARITY: Belongs to the methyltransferase superfamily. RsmB/NOP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ProDom; PD005242; NusB_dom; 1.

Gen. Genet. 257:62-70(1997).
-!- FUNCTION: Mediates oxidative stress response. Involved in both the oxidative and cadmium response pathways.
-!- SUBCELLULAR LOCATION: Woclear.
-!- SIMILARITY: Belongs to the bZIP family.

Sequences AAB11630-B11688 represent proteins from Agrobacterium vitis
which elicit a hypersensitivity response (HR) in a plant. The invention
also relates to nucleotide sequences (AAA61501-A61524) encoding the A.
vitis HR elicitor proteins. The HR is a rapid, localised necrosis that is
associated with the active defence of plants against many pathogens, and
cocur when a pathogenic organism interacts with a nonhost plant (i.e.
one in which intracellular bacterial growth and disease development do
not occur). Like other HR elicitors, the A. vitis elicitor functions in
non-host plants by causing a rapid hypersensitive response that results
in walling-off and killing of the pathogen. On grape plants, the A. vitis
c elicitor induces a restricted necrosis of tissues, resulting in the death
of plant cells and induction of pathogen resistance. A. vitis HR elicitor
of plant cells and induction form, are used to treat plants or their seeds
to impart resistance to disease, such as those caused by fungi, bacteria
or viruses; and to enhance growth, e.g., to increase yield or to provide
extless germination or maturation. The proteins can also be used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New protein from Agrobacterium vitis, useful e.g. for imparting resistance to disease or stress to plants, is involved in production of a

This invention describes novel nucleic acid (cDNA) sequences (A) which have anticancer activity and are highly expressed in ovarian tumor tissue (and some also in testis and breast cancer tissue). The products of the invention can be used for gene therapy. (A) are used (i) for recombinant expression of polypeptides (B) and (ii) to isolate complete genes. (B) are used (i) to identify agents suitable for treatment of ovarian cancer; (ii) directly for treating this form of cancer (including expression from gene therapy vectors) and (iii) for generation of specific antibodies.

(A) are identified by assembling ESTs (expressed sequence tags) from a particular tissue type before comparison of expression patterns. This allows a significantly longer fragment of the gene to be revealed, so should reduce the number of failures associated with the fact that ESTs from different libraries may represent different parts of the same unknown gene, distorting the estimated frequency of occurrence in a particular tissue. ANY7605-Y7663B represent protein fragments encoded by the human ovarian tumor CDNA library derived EST fragments represented in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ·:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New nucleic acid sequences expressed in ovarian, and some other, cancer tissues, and derived polypeptides, for treatment of ovarian cancer and identification of therapeutic agents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Dahl E;

                                                                                                                                                                                                                                                                                                                                                                                                        The invention describes a new isolated nucleic acid encoding a Klebsiella pneumoniae polypeptide. Also described are: a recombinant expression vector comprising the nucleic acid, operably linked to a transcription regulatory element; and a cell comprising the recombinant expression vector. The nucleic acid is useful for preparing a vaccine composition against Klebsiella pneumoniae. This is the amino acid sequence of a Klebsiella pneumoniae polypeptide of the invention
                                                                                                                                                                                                                                                                                                                                                 New nucleic acid encoding a Klebsiella pneumoniae polypeptide, useful for preparing a vaccine composition against Klebsiella pneumoniae.

                                                                                                                                                                                                                                                                      useful in the prevention, treatment and diagnosis of cancer (e.g. ovarian cancer), immune disorders, cardiovascular disorders and neurological
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to 2175 novel human ovarian antigens (ABP41054-ABP43228) and to CDNAs encoding them (ABQ54131-ABQ56305), and also encompasses polypeptides 90% identical and polynucleotides 95% identical to the sequences of the invention. The invention additionally relates to recombinant vectors and host cells comprising human ovarian antigen
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     and urinary system disorders. Ovarian antiger polypeptides and unitary system disorders. Ovarian antiger polypeptides and polymucleotides may also be used in screening for compounds which modulate ovarian antigen expression or activity. The polymucleotides may further be used for gene therapy, chromosome mapping, in the polypeptides may be used as food additives or to prepare antibodies useful in disease diagnosis, drug targeting and phenotyping. The present sequence represents a human ovarian antigen of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/bub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                   Isolated nucleic acid molecules encoding novel ovarian polypeptides,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ·,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 energy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                             New polynucleotides encoding full-length polypeptides, e.g. secreton and/or membrane proteins, useful for developing medicines for diseas which the gene is involved, or as target molecules for gene therapy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ovesity; anorexia; weight maintenance; impaired muscle development; diabetes; alkylguanine alkyltransferase; energy imbalance; enzyme; gene therapy; human; AGT.
                                                                                                                                                                                                                                                                                                                                                                        The present invention relates to novel human secretory or membrane proteins (ADA54072-ADA55710) and their coding sequences (ADA52433-ADA54071). The coding sequences are useful in the gene therapy of diseases caused by abnormalities of the proteins, e.g. cancer, inflammatory diseases, osteoporosis or neurological disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             useful for diagnosing or treating obesity, anorexia, diabetes or imbalance, and as targets for agents which act as modulators of physiological processes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New isolated nucleic acid molecule expressed in liver or stomach

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16175) and the encoded proteins (ABB57737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                 New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signaling and cell-cell
